

CHAPTER IV

CLOSING

4.1 Conclusion

Based on the data result or program that has been done in 2014-2015 program target classified by 3 category :

- Successful

Successful is the program that reach or beyond the targets that has been set

- Hasn't been succeeded

is programs that has not been succeeded that program haven't raise the target (56% s/d 99%) from what expected.

- Hasn't been succeeded with the lowest target

Hasn't been succeeded with the lowest that raise is haven't managed with the lowest < 56% from the target that expected.

4.2 Suggestions

Based on analysis results towards the programs that has been done it can be concluded as follows:

Successful programs are the efforts:

1. The increasing of visiting pregnant woman K1
2. The increasing of visiting pregnant woman K4
3. The increasing of childbirth rescued by health care personnel
4. The handling of obstetrics complications
5. The increasing of parturition service
6. Service and the construction of the family membership plan
7. The increasing of first neonatal visit
8. The increasing of complete neonatal visit
9. The increasing of baby visit
10. The handling of neonates with complications
11. The increasing of baby under five years care
12. Networking health elementary school

Can be seen that there has 10 programs that raise the targets and my suggestions to the future are to give the special attentions managers and implementers of program eventhough the number of health workers in border area especially at entikong's clinic has not been adequately but improved the achievement it turns out have shown changes or significnat changes so further study required. The improvement of health care access in the area of the border and the hinterland will be very beneficial to the community.
