

## ABSTRACT

Based on the result of pre observation, there are some problems that can be caused the average of study result in MI Dukuh students are less. They are as follows: (1) The application of method which applied by the teacher is not appropriately and not effectively in teaching learning; (2) The students are not interested to the fiqh lesson; (3) The class situation is not comfortable; (4) the students achievement is decreased. From all of the causes above, the teaching learning method is still conventional or traditional. The teachers only use speech method, so the students can be bored in the classroom.

According to the explanation above, it can be formulated some of main problems, they are: 1. Is the application of SAVI method can increase the student's active in fiqh lesson to the fourth grade students of MI Dukuh, Lembeyan, Magetan in schooling year 2011/2012? 2. Is the application of SAVI method can increase the student's motivation in fiqh lesson to the fourth grade students of MI Dukuh, Lembeyan, Magetan in schooling year 2011/2012? 3. Is the application of SAVI method can increase the student's achievement in fikih lesson at MI Dukuh, Lembeyan, Magetan in schooling year 2011/2012?

The objectives research is: 1. The application of SAVI method is to increase the student's active in fiqh lesson to the fourth grade students of MI Dukuh, Lembeyan, Magetan in schooling year 2011/2012. 2. To increase the student's motivation in fikih lesson to the fourth grade students of MI Dukuh, Lembeyan, Magetan in schooling year 2011/2012 by applying SAVI method. 3. To increase the student's achievement in fikih lesson to the fourth grade students of MI Dukuh, Lembeyan, Magetan in schooling year 2011/2012 by using SAVI method.

This kind of research is classroom action research by applying SAVI method in teaching fikih to increase the student's achievement of MI Dukuh Lembeyan Magetan. In collecting the data, the researcher used observation method, interview, test, and documentation.

The first cycle, the average score gets 61,62. The complete students are about 6 students and the incomplete students are about 5 students. The completeness study of students was reached 64% as a whole. Second cycle, the average score gets 69,54. The complete students are about 8 students while the incomplete students are about 3 students. The completeness study of students was reached 73% as a whole. The third cycle, the average score gets 78,36. All of students can reach the completeness study. They are 11 students. The completeness study can reach 100% as a whole. From the result of students score, it can be prove that there is upgrading score in every cycle. It is prove the SAVI method is more effective used to teach fikih lesson especially in the material of "Mencontoh Bacaan Sholat" following the example of pray reading.
