INTISARI

Latar belakang: Kegiatan pendokumentasian asuhan keperawatan merupakan unsur pokok dalam pertanggung jawaban kinerja profesi keperawatan. Untuk itu diperlukan supervisi keperawatan agar efektifitas dan efisiensi kerja optimal. Sekitar 4 bulan terahir pelaksanaan supervisi keperawatan di rumah sakit PKU Muhammadiyah Bantul sedang vakum, hasil wawancara terhadap kepala ruang tersirat bahwa ada indikasi ketidak puasan kepala ruang yang juga ditunjuk sebagai supervisor dalam hal penerimaan insentif.

Metode: Jenis penelitian ini adalah penelitian kuantitatif dengan rancangan *quasi experiment pre* dan *post-test* tanpa kelompok kontrol. Populasi adalah seluruh kepala ruang rawat inap RS PKU Muhammadiyah Bantul. Sampel 5 orang kepala ruang rawat inap, dengan menggunakan *total sampling*.

Hasil dan pembahasan: Hasil penelitian diketahui persentase rata-rata pelaksanaan pendokumentasian asuhan keperawatan sebelum pelatihan supervisi keperawatan di ruang rawat inap RS PKU Muhammadiyah Bantul sebesar 42,6%, dan setelah pelatihan diperoleh persentase sebesar 51,4%. Berdasarkan hasil uji statistik dengan *paired t-test* diketahui *p value* untuk efektivitas penerapan supervisi kepala ruang terhadap pelaksanaan pendokumentasian asuhan keperawatan di ruang rawat inap RS PKU Muhammadiyah Bantul sebesar 0,002 ($p<0,05$). Terdapat peningkatan sebesar 8,8% dalam persentase rata-rata pelaksanaan pendokumentasian asuhan keperawatan sebelum dan sesudah pelatihan supervisi kepala ruang.

Kesimpulan: Pelatihan supervisi kepala ruang terbukti efektif terhadap pelaksanaan pendokumentasian asuhan keperawatan di ruang rawat inap RS PKU Muhammadiyah Bantul.

Kata Kunci : supervisi, kepala ruang, dokumentasi asuhan keperawatan.

**EFFECTIVENESS OF THE HEAD OF WARD SUPERVISION TOWARD
DOCUMENTING OF NURSING CARE IN THE WARD OF
PKU MUHAMMADIYAH HOSPITAL OF BANTUL**

ABSTRACT

Background: Activity of care documentation is a main element of responsibility for care profession performance. Therefore, treatment supervision is needed in order that effectiveness and efficiency of work are optimum. In approximately recent 4 months, the implementation of treatment supervision in the PKU Muhammadiyah Hospital of Bantul was vacuum, results of interview with the ward heads indicated that there was indication of dissatisfaction of ward head which was also appointed as supervisor in terms of incentive acceptance.

Method: This study is quantitative research with quasi experiment pre and post-test design without control group. Respondents of this study were all inpatient ward heads using total sampling.

Results and discussion: Results of this study indicated that average percentage of care documentation (standard operational procedure) implementation before treatment supervision training in the inpatient wards of PKU Muhammadiyah Hospital of Bantul was 42.6%, and after training, the percentage was 51.4%. Based on results of statistical test with paired t-test, it was found that p-value of effectiveness of ward head supervision application on implementation of care documentation in the inpatient ward s of PKU Muhammadiyah Hospital of Bantul was 0.002 ($p<0.05$). There was 8.8% increase in average percentage of care documentation implementation before and after ward head supervision training.

Conclusion: The ward head supervision training was found effective on implementation of care documentation in the inpatient wards of PKU Muhammadiyah Hospital of Bantul.

Keywords: supervision, head ward, documentation of nursing care
