### Greece - Gross domestic product per capita in current prices

**18,945**

(US dollars)  
in 2017

Greece GDP per capita was at level of 18,049 US dollars in 2016, up from 17,955 US dollars previous year, this is a change of 0.52%. The description is composed by Yodatal, our digital data assistant. Have a question? [Ask Yodatal](#)

GDP per capita is gross domestic product divided by midyear population. GDP is the sum of gross value added by all resident producers in the economy plus any product taxes and minus any subsidies not included in the value of the products. It is calculated without making deductions for depreciation of fabricated assets or for depletion and degradation of natural resources. GDP is expressed in current U.S. dollars per person. Data are derived by first converting GDP in national currency to U.S. dollars and then dividing it by total population.
