

## **Chapter Five**

### **Conclusion and Recommendation**

#### **Conclusion**

Motivation becomes an important part for children to develop their knowledge and skill, not only in the academic process but also non-academic process. Motivation is the first foundation for build the struggle to reach something. Especially for students, motivation is very needed by them for getting the spirit for studying and finding new knowledge and skills to their future life.

There are many ways to get motivation. It comes from two aspects; intrinsic and extrinsic. The example of extrinsic aspect is coming from parent's factor. Parents give several influence for students related to motivation acquisition. Parent's educational level is one of the factor that has a correlation with student's learning motivation. Parents who has high level of education can probably be able to develop the children's motivation. However, parents from low level of education also has a correlation with their children's motivation.

This chapter will present some conclusions about the research. Here is the conclusion:

1. There are several levels of educational background from parents of students in ELED UMY 2012.

2. Based on the findings and discussion chapter, the motivation level of students in ELED UMY 2012 is high and it has a different number of the score in each level of parents' education.
3. There is a correlation between parent's educational level and student's learning motivation at ELED UMY 2012. The type of correlation is reverse correlation. It means that if the level of parents educational is low, the student's motivation learning is high.

### **Recommendation**

Based on the result of this research, there are some suggestions which will be presented for the students, teachers and parents.

1. Students

Students will have more motivation than before, especially the students who comes from low level of parent's education. Sometimes, students who come from low level of parent's education feel unconfident with their capability in academic or non-academic process. By this research, those students will be able to build their own motivation with confidence.

2. Teachers

Sometimes, teacher will find students who come from low level parent's educational level. Several of them, may not be confident with their own capability. They are afraid and embarrassed to show their performance in their activities at school or college. The role of teacher is to give a motivation and give support to them

and emphasize that all students have an equal opportunity to show their ability and their skill.

### 3. Parents

Parents should be able to motivate their children in the learning process. There are a lot of ways to motivate and support their children in learning. Even parents who has low educational level can be able to help their children to build up the children's motivation in the learning process. The important thing that parents must do is making a positive relation and communication between parents and children or students.
