

ABSTRACT

The low level of employment in Indonesia has led to more complex problems that can affect social and economic problems. This encourages the migration of the population. International labor migration becomes one of the alternatives that can be done, as well as a solution to the unemployment problem. Labor migration is caused by several factors. This study aims to analyze the impact of unemployment rate, provincial minimum wage, poverty rate, human development index and GDP per capita by using Random Effect Methods (REM). This research uses secondary data in the form of time series data and cross sections data during the period 2010-2016.

Based on the analysis that have been made the results are the variables unemployment rate, poverty, provincial minimum wage that can affect significantly for migration Labor By Province In Indonesia. However, the variables of human development index and gdp per capita are not significantly for migration Labor By Province In Indonesia.

Keyword : Out Migration of Labor Indonesia, Gdp per capita, Unemployment, Poverty Human Development Index, wage, Random Effect Methods (REM).
