# Background, aim, research methods

## Background

- Family caregiver involvement in patient care is a pivotal feature of health care systems worldwide
- Active family engagement in the patient's care in times of illness is expected in the Indonesian culture.
- Little is known of the level and type of care being provided by family in palliative care, including home based care.

## Aim

- To explore the involvement of family caregiver in home-based palliative care for cancer patients in an Indonesian palliative care facility

## Research methods

- Contemporary ethnography
- Observations
- Informal interviews

# Results
