

CHAPTER IV

CLOSING

A. Conclusion

Based on the finding of research, that there are some points concluded the researcher had concluded as follow:

1. Effectiveness
 - a. The purpose of the special health insurance for people with disabilities was to fulfill the rights and access for people with disabilities in Gunungkidul Regency, and it had been quite effective.
 - b. The target of the Special Health Insurance Program in the Jamkesus program activities can be said not ineffective yet, because the implementation of the Jamkesus program activities carried out in the Gunungkidul Regency is still carried out once a year in the community with other regions.
2. Efficiency
 - a. Human resources in the *Jamkesus* program in Gunungkidul Regency owned by the Social Health Insurance Administrator of DIY and networks owned by the Social Service of Gunungkidul Regency had been able to help maximize the Special Health Insurance program (*Jamkesus*).
 - b. Fund in the Implementation of the Jamkesus Program in Gunungkidul Regency still had problems because, Gunungkidul Regency does not had yet its own regional budget in the implementation of *Jamkesus*. Therefore, the budget in implementing the *Jamkesus* program in Gunungkidul Regency itself was still fully funded by the APBD of DIY Province through the Social Health

Insurance Administrator of DIY, so the APBD of DIY budget is allocated very limited.

3. Equity

The facilities and infrastructure distributed by the Social Health Insurance Administrator of DIY for people with disabilities in Gunungkidul Regency had been fulfilled and assisted people with disabilities especially those with disabilities in Gunungkidul Regency.

4. Responsiveness

The responsiveness of the community to the *Jamkesmas* program, especially the people of Gunungkidul Regency, has a fairly good response. Many people accepted the *Jamkesmas* program well because, with the *Jamkesmas* program, people with disabilities in Gunungkidul felt quite helped in reducing the burden and problems they faced.

5. Accuracy

The accuracy of the *Jamkesmas* program was already quite effective and efficient and it was useful for people with disabilities especially those in Gunungkidul Regency. However, the Special Integrated Health Insurance program in Gunungkidul Regency was only carried out once a year making it still lacking in fulfilling the rights and attention in Gunungkidul Regency.

Hence, the evaluation results are that generally, the *Jamkesmas* program run by the Social Health Insurance Administrator of DIY in Gunungkidul Regency with the Social Service of Gunungkidul Regency has been running properly and it is in accordance with the objectives of the *Jamkesmas* program, namely the fulfillment of rights and access for

disabled persons. However the Jamkesus program target is still not effective yet because, the implementation of the Jamkesus program in Gunungkidul Regency is still carried out once a year and there is no separate budget from the Gunungkidul regional APBD for the implementation of Jamkesus activities so that the DIY provincial budget is allocated very limited. Therefore, the Jamkesus program activities in Gunungkidul Regency must continue to be improved so that the implementation is more optimized.

B. Suggestion

From the results of the discussion and conclusions, the suggestions that can be given by the researcher are as follows:

1. The need for people with disabilities in Gunungkidul Regency should get more attention and assistance from the district government of Gunungkidul Regency such as the existence of special financial assistance for the implementation of *Jamkesus* in Gunungkidul Regency from the Gunungkidul Regency government, so that the implementation of the Special Health Insurance program in Gunungkidul Regency will be further increased.
2. Collaborate more closely between human resources owned by the Social Health Insurance Administrator of DIY and human resources owned by the Social Service Office of Gunungkidul Regency so that the implementation of the Jamkesus program remains well implemented.
