INTISARI

Latar belakang: Berdasarkan laporan investigasi rekap tahunan di Rumah Sakit PKU Muhammadiyah Gamping pada tahun 2013 melaporkan insiden keselamatan pasien terutama angka kejadian jatuh dengan jumlah 3 pasien, sedangkan pada tahun 2014 melaporkan kejadian jatuh dengan jumlah 4 pasien, pada tahun 2017 melaporkan insiden pasien jatuh dengan jumlah 3 pasien.

Tujuan penelitian: Untuk mengetahui pengetahuan perawat tentang panduan resiko jatuh, mengetahui kemampuan perawat dalam simulasi langkah-langkah panduan resiko jatuh, mengetahui kepatuhan telaah rekam medis pasien, mengetahui serta melihat pengaruh pengetahuan, kemampuan terhadap kepatuhan. Metode penelitian ini menggunakan metode kuantitatif dengan cara analitik deskriptif. Sampel yang digunakan dalam penelitian ini sebanyak 37 sampel.

Hasil penelitian: Hasil kuesioner menunjukkan bahwa pengetahuan perawat sebagian besar memiliki kriteria cukup yaitu sebanyak 59,5%. Hasil telaah rekam medis menunjukkan hasil 100% perawat patuh. Hasil peragaan menunjukkan bahwa 100% perawat mampu memperagakan langkah-langkah panduan risiko jatuh. Terdapat pengaruh pengetahuan, kemampuan terhadap kepatuhan.

Kesimpulan: Berdasarkan penelitian ini dapat disimpulkan bahwa semua perawat memiliki kepatuhan dan kemampuan dalam menjalankan pasien safety terutama mengenai risiko jatuh. Namun pengetahuannya masih dalam kategori cukup.

Kata Kunci: Keselamatan Pasien, Risiko Jatuh

ABSTRACT

ANALYSIS OF IMPLEMENTATION OF PATIENT GUIDANCE OF FALL RISK AT PKU MUHAMMADIYAH GAMPING HOSPITAL

ABSTRACT

Background: Based on the annual recap investigative report in 2013, at PKU Muhammadiyah Gamping Hospital of Yogyakarta, it was reported that the patient safety related incident, especially for the falling incident, had a frequency of 3 patients, whereas in 2014, it was reported that the falling incident had a frequency of 4 patients, and whereas in 2017, it was reported that the falling incident had a frequency of 3 patients .

Research Purposes: The objectives of this study was to find out knowledge about the fall risk guidelines, find out the nurses ability in the risk reduction guide steps to fall, knowing the compliance of nurses in examining patient medical records, know and see the influence of knowledge, ability to obedience. This research method uses quantitaive methods with descriptive analytical methods. The sampel used in this study were 37 samples.

Result: The results of the questionnaire showed that nurses knowledge mostly had sufficient criteria, namely as much as 59,5%. The results of the medical record review showed that 100% of nurses were obedient, simulation results show that 100% of nurses are able to demonstrate the steps to guide risk falls. There is the influence of knowledge, ability to obedience.

Conclusion: The conclusion of this study is that all nurses have compliance and the ability to carry out patient safety, especially regarding the risk of falls, but thier knowledge is still in sufficient category.

Keywords: Patient Safety, Risk Fall
