

## **ABSTRACT**

**SUCCESS CLAIM OF RICE FARMING INSURANCE PROGRAM (ASURANSI USAHA TANI PADI/AUTP) IN ADIMULYO DISTRICT KEBUMEN REGENCY OF CENTRAL JAVA. GUSTI AGUNG SETIAWAN (Supervised by MUHAMMAD FAUZAN, SP, M. Sc. & Dr. TRIYONO, SP, MP).** The AUTP program is a form of natural disaster risk management providing compensation to the farmers for losses suffered by rice farming. The purpose of this study is to determine the success level of the AUTP program and determine the correlation affected of it program success in Adimulyo District, Kebumen Regency, Central Java. The research location was determined purposively with the basis of the area that had the most rice yields, the largest land area, and a high level of disaster prone in Kebumen Regency. The sample in this study amounted to 61 farmers and 5 leaders of farmer groups. The method of this research is using descriptive analysis method, score achievement, and Spearman Rank correlation analysis. The results showed that overall every stage of the implementation of the AUTP Program in the Adimulyo District of Kebumen was carried out less in accordance with the AUTP implementation guidelines, and socialization at the farmer level had not been carried out effectively. The successful value of the AUTP Program in the farmer group was included in the quite successful category with a score of 60%. The success of the AUTP Program for farmers is included in the quite successful category with a score of 60.63%. Correlations that influence the success of the AUTP Program in farmer groups are the activeness of farmer groups and the availability of farmer group cash. While the correlation affecting the success of the AUTP Program for farmers is the age of the farmer.
