

ABSTRACT

International world today face a common problem which is environment problem, climate change. The existence of this problem established Kyoto Protocol that is binding the entire member that ratified it. Kyoto Protocol is a legally binding that concerns on the environmental issues which has mechanisms in solving the problem there are Joint Implementation, Emission Trading, and Clean Development Mechanism. Indonesia is one of countries that ratified the Protocol. Later, Indonesia as one developing country which is need the industrial factory to develop its country decided to ratify the Protocol that minimize the greenhouse gases which decrease industry indirectly. Then, this research aims is to understand the implementation of Indonesia toward Kyoto Protocol since its ratification 1997 – 2014. The writer used decision making process model to analyze how is implementation of Kyoto Protocol 1997 – 2014 in Indonesia. All the data are taken from books, journals, articles on internet and other relevant data to the research.
