

CHAPTER IV

CONCLUSION

4.1. Conclusion

Based on the above explanation, it can be proposed that the Central Bureau of Statistics of Special Region Yogyakarta has a strategic role in the development planning of the Special Province of Yogyakarta.

1. In carrying out its duties and roles in providing development planning data, Central Bureau of Statistics has been regulated in a clear Law No. 16 year 1997 on Statistics as a provider of basic data on development planning.
2. The most important development planning data requires by Regional Development Planning Agency (BAPPEDA) Special Region of Yogyakarta is human resources and economic data, because in 2017 the focus of development in Special Region Yogyakarta is in development of human resources and economic growth.
3. Internal and external barriers experienced by the Central Bureau of Statistics cause less optimal organizational performance and the quality of data have not yet optimal.
4. Development planning data provided by BPS can contribute to better realization of Regional Development Planning Agency (BAPPEDA) programs with the use of accurate and optimal data and support from various parties in collecting data of development planning.

5. From the analysis that has been done, found that the Central Bureau of Statistics in providing development planning data requires strategy to optimize the performance.

4.2. Recommendation

Based on the conclusions above, then it can put forward some suggestions to the Central Bureau of Statistics as follows:

1. It is necessary to continuously socialize the importance of statistical data in development planning to the respondents.
2. Need human resources development in order to increase the competence of skills through training that supports development planning data collection.
3. Provide basic training on simple computer programming related to the implementation of tasks and functions of each section and field
4. Encourage the data forums established with the SKPD of Special Region of Yogyakarta to continuously improve the ability to provide development planning data so as to create accurate data.
